

## Summary

In this month's UX review, we will focus on some UX issues of the calendar (Plan) view and potential ways to improve it. The calendar view in Gameplan is one of the most exciting features that yields the potential of creating a satisfying user experience.

To create a valuable experience, we need to ensure that the calendar view meets the following requirements:

1. **Desirability** - clean UI and ease of use
2. **Usability** - standard controls and predictable behaviors
3. **Credibility** - consistency in look-and-feel

This review will primarily focus on the look-and-feel and the ease-of-use of the calendar.

In terms of look-and-feel, the calendar view can improve on contrast, alignment, consistency and spacing. As for usability, we will look at form controls and system feedback that can standardize the experience and minimize frustrations while using Gameplan.

---

I chose the calendar view for this month's review for the following reasons.

1. **High Customer Value** - it helps users visualize their plans
2. **First Impression** - it's the first thing users see
3. **Probable Differentiator for Gameplan** - no more spreadsheet, no more working in silos
4. **Customer Interactions** - opportunity for creating an enjoyable experience

## C.A.R.P. Review (Issues)

### Contrast

1. Light gray text on white background
2. Too many colors in the calendar
3. No visual cue to separate plans from campaigns, campaigns from programs, etc.
4. Form controls and links are unclear - click-ability issue

### Alignment

1. Right aligned tabs get ignored
2. Top blue bar with highlight stats takes up screen real estate
3. Unnatural navigation pattern - too much eye movements expected

### Repetition (Consistency)

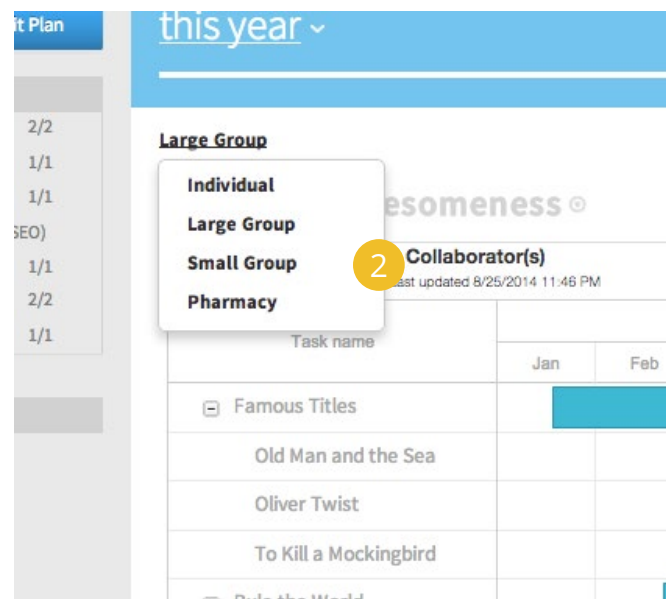

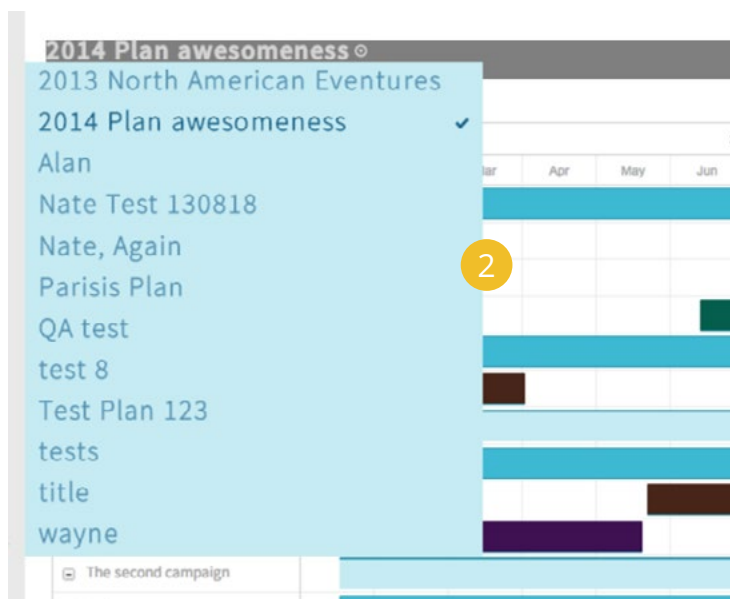

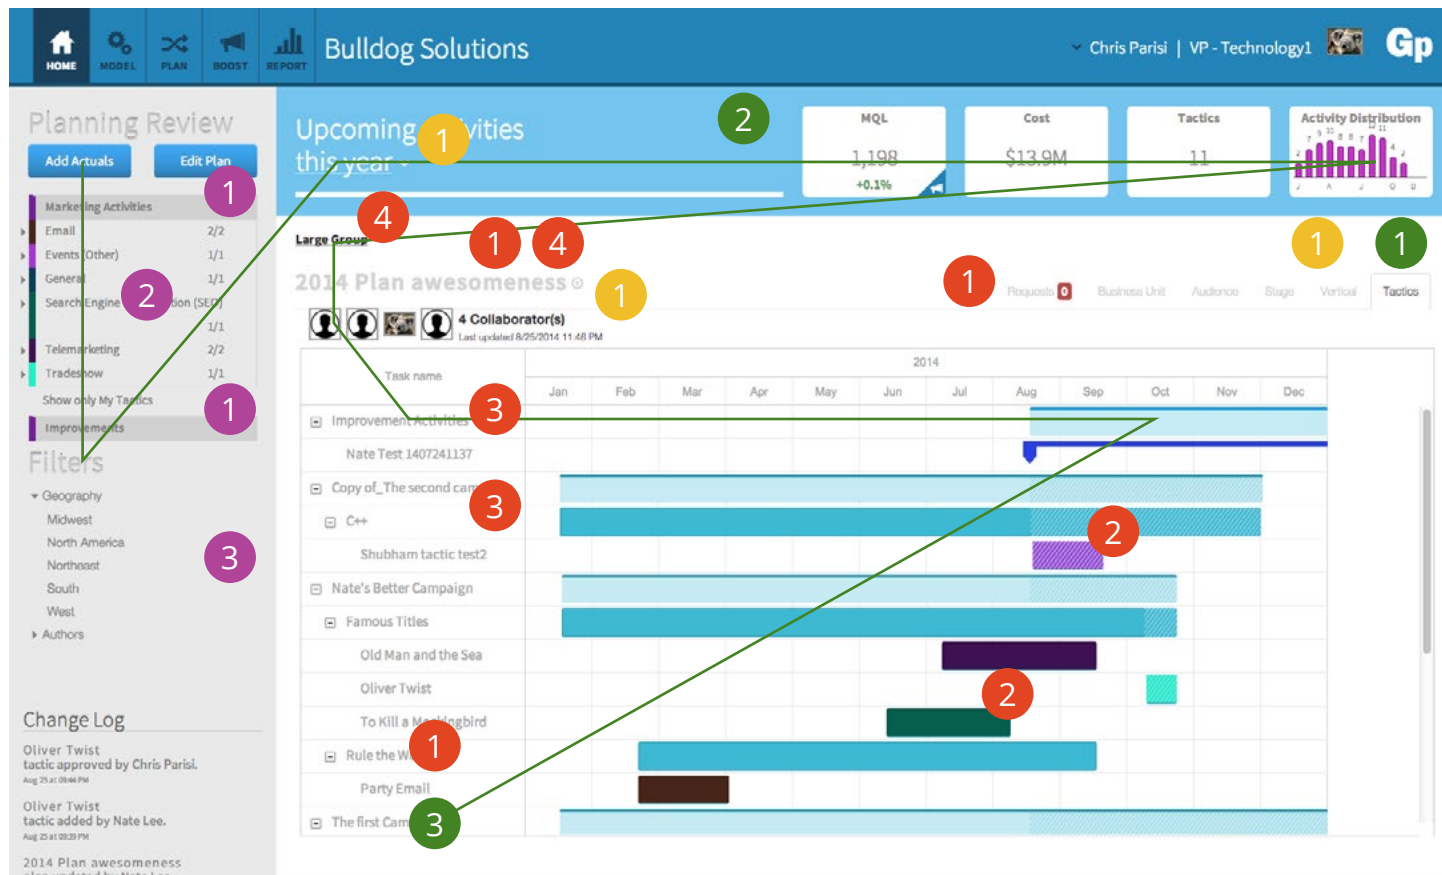

1. Different controls/methods in different places
2. Different drop down interactions

### Proximity

1. Filters, legends and action buttons are too close together
2. Bar legends take up space and do not provide much value
3. Filter structure unclear - users cannot tell when a filter's turned on or off

# Screenshots

● Contrast

 ● Repetition   
 ● Proximity

## Usability Review

### Issues

1. Double clicks are not intuitive in a web application
2. Calendar grid is not adjustable to users' preference
3. Users cannot see more than one year's span
4. Users do not get system feedback when they roll over a bar
5. Sorting capability is not available for the name column

### Proposed Improvements

1. Cleaner UI with more standard controls
  - Updating controls and drop downs (4 hours)
  - Updating layout (8 hours)
2. Collapsible sidebar to increase screen-estate
  - Adding collapsible script (2 hours)
  - Adjusting elements' responsiveness (4 hours)
3. Move action buttons to the main panel so the sidebar is reserved for tabs and filters
  - HTML changes in the template throughout Gameplan (4 hours)
4. Inject interactions to calendar by adding tooltips, highlight, cursor changes, etc.
  - Coding (8 hours)
5. Add sorting, adjustable table cell and horizontal scroll bars to the name column
  - Coding (8 hours)
6. Redesign filters to provide visual cues for on/off status and improve spacing
  - Refreshing filters (4 hours)

---

**Total Estimated Development Time: 40 hours**
